PROFESSIONAL SUMMARY

Java Full Stack Developer with 3.5 years of experience in the software industry, designing and delivering scalable web applications for fleet management, government, and education domains.

Specialized in Java, Spring Boot and NestJS microservices, React and Angular front-ends, and SQL performance tuning. Currently building a real-time, event-driven fleet telematics platform with Kafka, Apache Flink and ClickHouse. Strong foundation in REST API design, secure authentication, and Agile delivery.

KEY SKILLS

Backend

Java, Spring Boot, Spring Security, Microservices, NestJS, Python

Frontend

React, Next.js, Angular, JavaScript, TypeScript

Databases, Caching & Streaming

PostgreSQL (PostGIS), ClickHouse, MSSQL, MySQL, Valkey, Apache Kafka, Apache Flink

DevOps & Tools

Docker, Kubernetes, Helm, GitHub Actions, Git, SVN, Maven, Postman, JIRA

Web & API

RESTful APIs, JSON, Payment Gateway Integration, OTP Authentication

Testing & Practices

JUnit, Agile, Scrum, Generative AI, Prompt Engineering

PROFESSIONAL EXPERIENCE

Gnapi Technologies – Software Engineer

Project: VZone (Multi-tenant Fleet Telematics Platform)

Nov 2025 – Present | Bengaluru

- Build features end to end on a real-time platform ingesting ~20–30k GPS events/sec from ~10,000 vehicles, using Kafka, Apache Flink (Java), NestJS/TypeScript microservices, PostgreSQL, ClickHouse, Valkey and a Next.js/React front end.
- Delivered the Driver Activity report across five services (Flink job, ClickHouse table, NestJS APIs, reusable React grid), attributing activity to drivers via temporal joins; backfilled ~63k segments.
- Optimized the report query by replacing per-window ClickHouse queries with one batched query and partition pruning, cutting hundreds of database round trips to one per report.
- Built Flink fuel refuel/drain (theft) detection with idempotent upserts for at-least-once Kafka delivery, plus fuel estimation for vehicles without sensors.
- Built the Notification Center (alerts, FCM web push), Driver Violation report and Compare Routes in Next.js/React.
- Root-caused an ORM bug silently dropping rows and added real-PostgreSQL regression tests; moved the web app to runtime config so one Docker image runs across all environments on Kubernetes.

ICT Infracon LLP – Associate Software Engineer

Projects: Coffee Board of India, Student Achievement Tracking System

Apr 2023 – Oct 2025 | Bengaluru

- Developed enterprise applications using Java and Spring Boot microservices, increasing system efficiency by 25%.
- Integrated REST APIs with Angular front-end, improving UI responsiveness and client satisfaction.
- Optimized SQL queries, achieving a 15% boost in database performance.

Key Projects

- **Coffee Board of India (Spring Boot, Angular, MSSQL):** Integrated the SBI payment gateway, built an OTP-based registration and verification module, and supported production deployment.
- **Student Achievement Tracking System (Spring MVC, Oracle, Jasper):** Built student performance tracking modules with Jasper dynamic reports, and optimized Oracle queries and stored procedures.

EDUCATION

Bachelor of Science (Mathematics) – Tumkur University | 2022 | CGPA 7.0

CERTIFICATIONS

Java Full Stack Development – JSpiders • JSE – Certified Entry-Level JavaScript Programmer • JSA – Certified Associate JavaScript Programmer • PCEP – Certified Entry-Level Python Programmer
